In order to achieve 100% shading effect, the fans and wet curtains of the light deprivation greenhouse are equipped with hoods, which can perfectly solve the problem of light leakage.

Two Ventilation Styles

Roof Vents System

Side Vents System

Light system

Growing Light System

Lighting is essential for the growth of hemp. In different growth periods, the required light time is different. Insufficient light will lead to growth retardation. Our LED growing lights can meet the growth needs of different periods, allowing you to grow the best quality plants

We have a variety of LED plant growth lights to provide, you can contact us for details

Automatic Opening

Curtain System

User can set different time periods to turn on and off the control of the light deprivation system according to the required light conditions of the crop.

Control System

Equipped with the central control system, it could control all facilities in the greenhouse automatically, such as the windows, fans, curtains, etc, also could adjust the temperature, humidity, light and other conditions to make the environment more suitable for plant growth.
